

**Ecogots manufactures.
You make the difference.**

ecogots®

Catalogue 2026

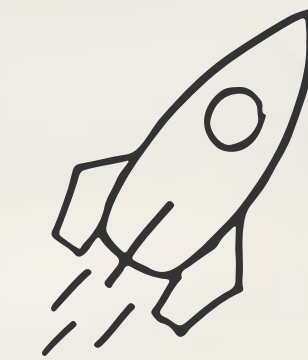

Ecogots was created with one clear purpose:

To design and manufacture products that are **100% reusable and recyclable** — durable, safe, and environmentally responsible.

We focus on **developing mainly reusable packaging** made from innovative and sustainable materials, without compromising on quality, design, or functionality.

We believe **real change is possible** through more responsible consumption habits and adaptation to **new regulations** — always guided by our environmental commitment.

All our products meet the required **food-contact and reuse certifications**, ensuring **safety, traceability, and full regulatory compliance**.

mission

To design and manufacture products 100% reusable and recyclable.

vision

To be one of the leading companies committed to sustainability and the environment.

values

Opting for sustainable development, promoting circular economy and socially committed.

Active, aware, and responsible people.
People who turn values into action.

Transparency. Environmental awareness. Sustainability.
Local economy.

A smarter use of resources — without compromising on
quality.

We design, develop, and manufacture sustainable,
reusable, and durable products for organizations,
institutions, companies, communities — and above all,
for people.

For those who want to make a real difference.

**We manufacture for
people like you.**

We use purified rice husk biomass from the Ebro Delta — a patented compound developed by Oryzite® — to manufacture our products.

Our key differentiator is the responsible selection of raw materials. We promote the circular economy, reduce pollution, and significantly lower CO₂ emissions.

Our containers are strong, durable, and designed with an attractive eco-design for everyday use.

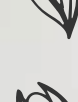

Their natural, opaque appearance gives each product a distinctive and authentic look.

km0

Unique characteristics of Oryzite:

-  Faster moulding cycles
-  Improved mechanical performance
-  Lower energy consumption during injection moulding
-  Reduced processing temperatures
-  Shorter manufacturing times
-  Local sourcing (km0)

What we commit to — we deliver.

Reducing our carbon footprint

We have reduced CO₂ emissions by up to 72% thanks to our material selection, manufacturing process, and locally sourced raw materials. Domestic production allows us to minimize transport impact and maintain strict quality control.

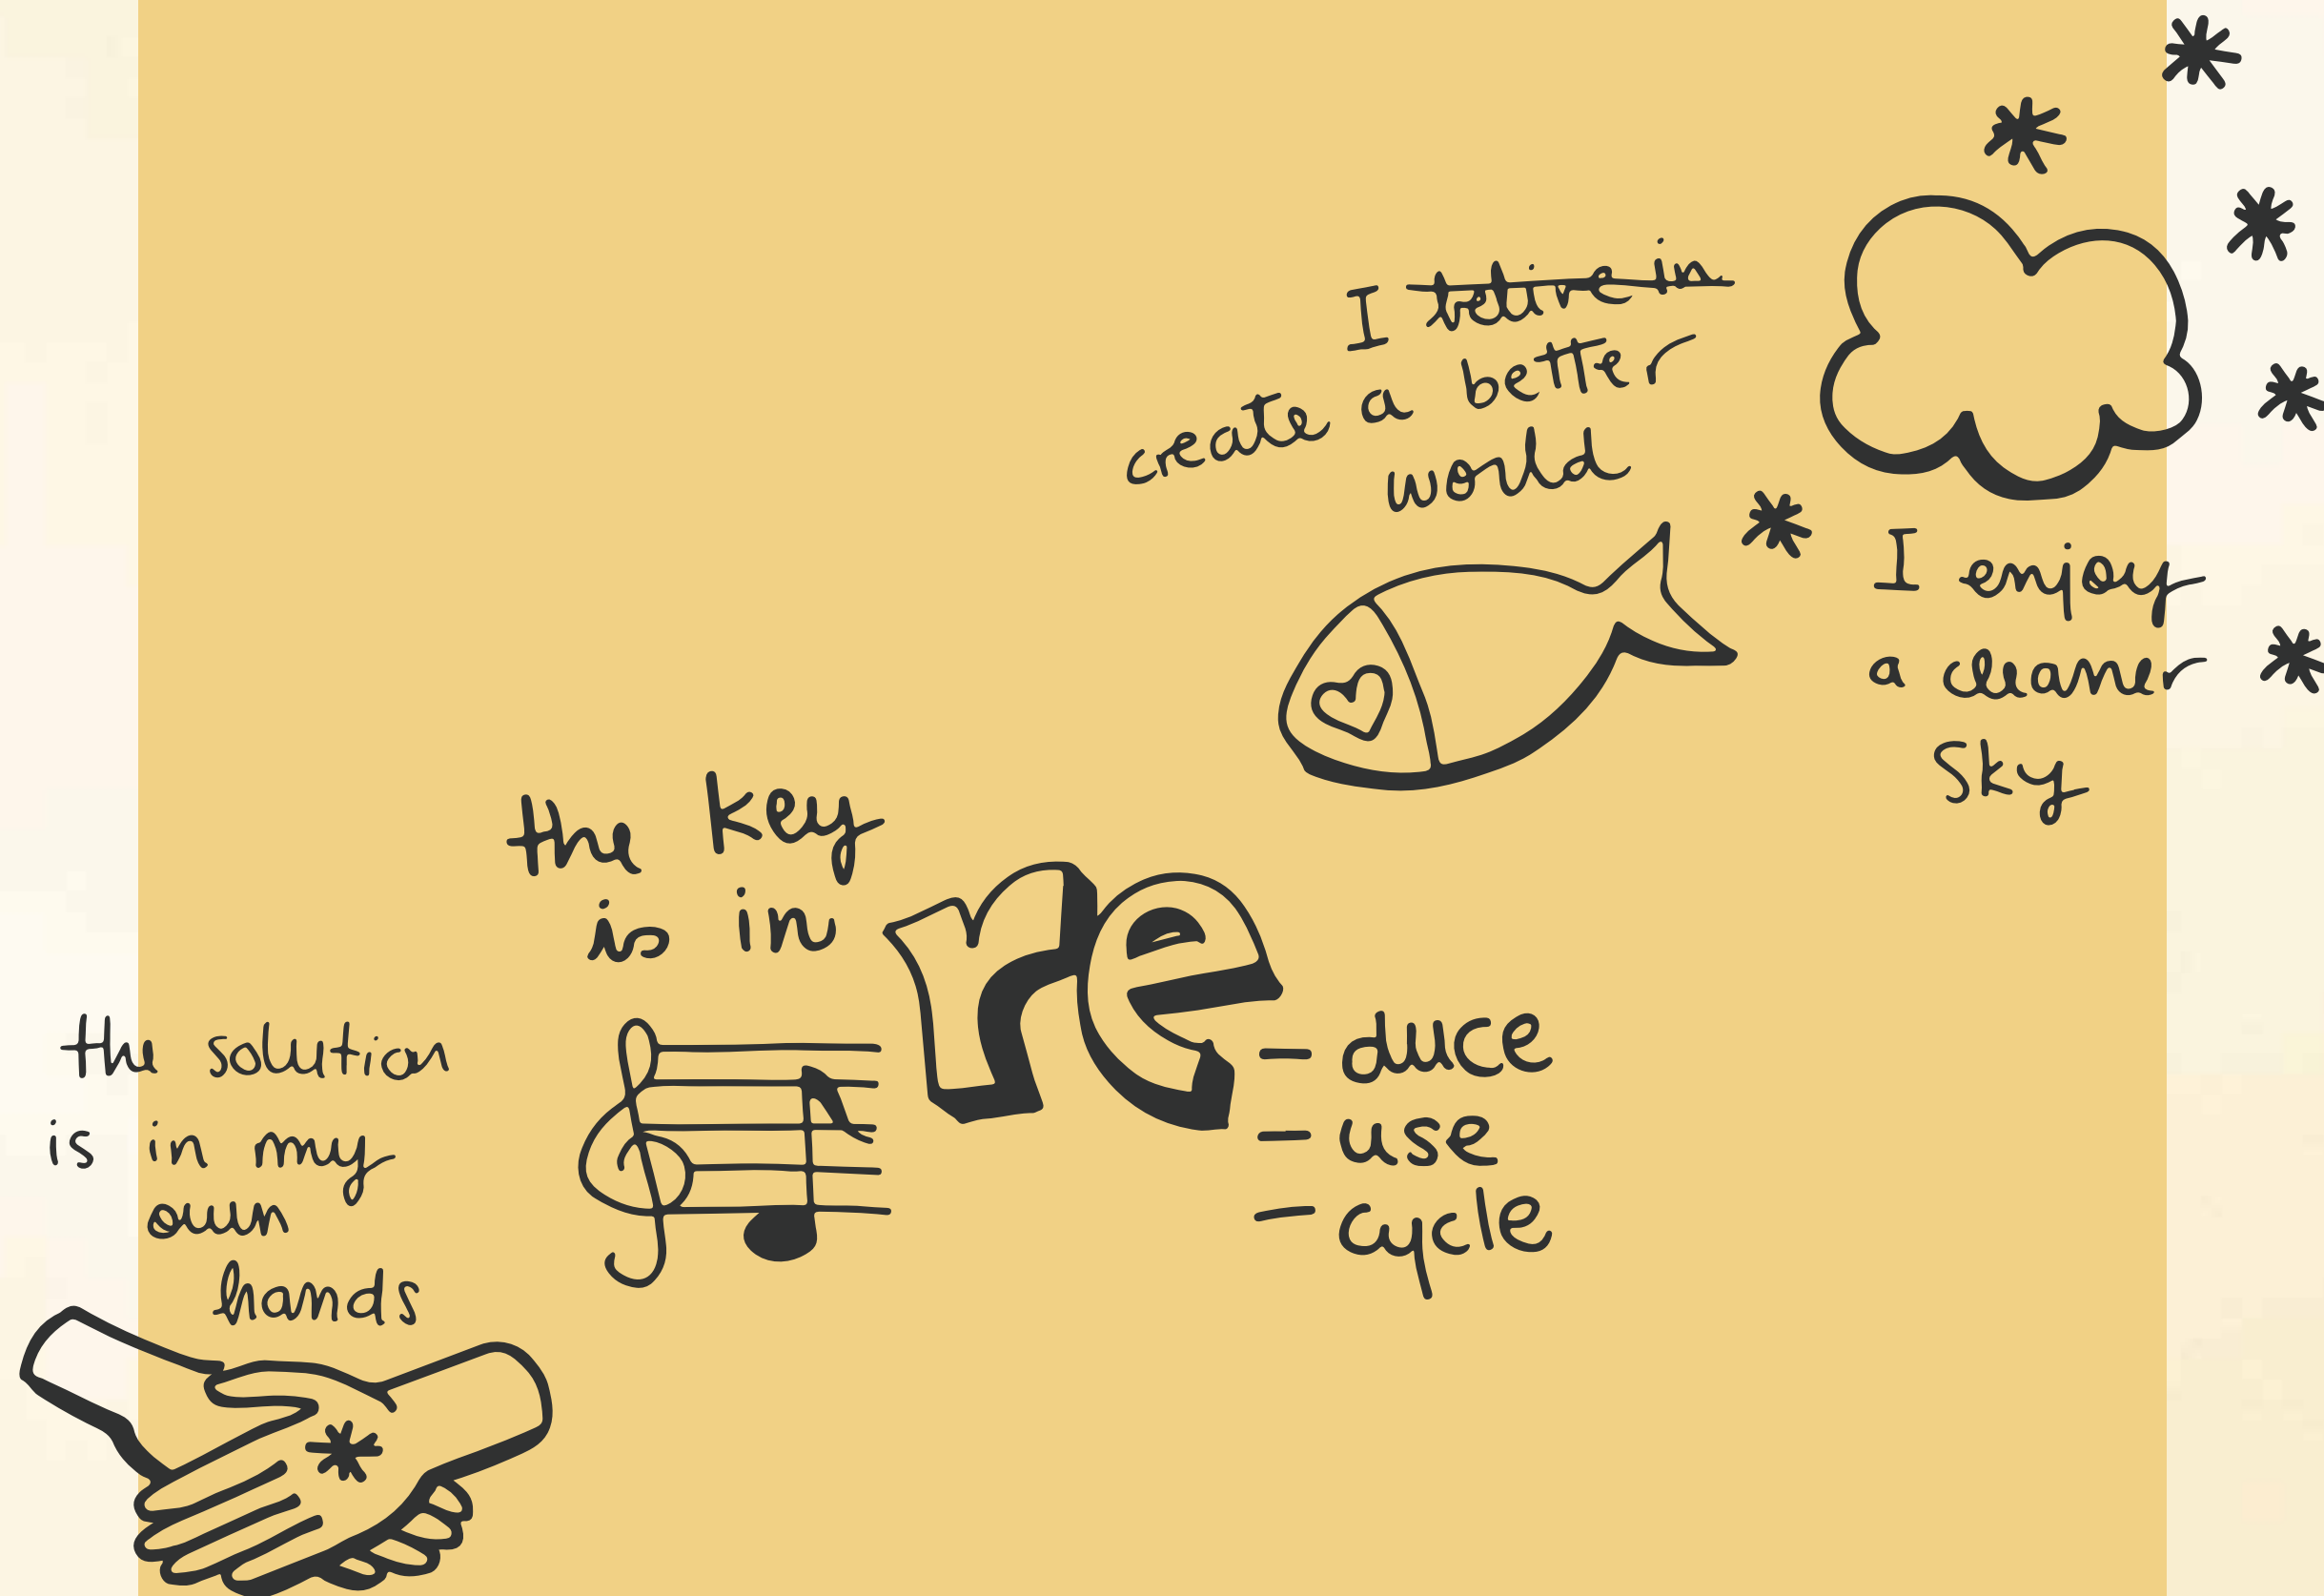

Zero waste commitment

Reuse is the most effective way to reduce waste. By extending product life cycles, we avoid unnecessary production and resource consumption. We are fully committed to the circular economy.

-72%CO₂

From a health perspective, food packaging must be safe and inert. From a durability perspective, it must be consistent, long-lasting, and recyclable at the end of its useful life.

That is why we apply strict controls throughout the entire manufacturing process.

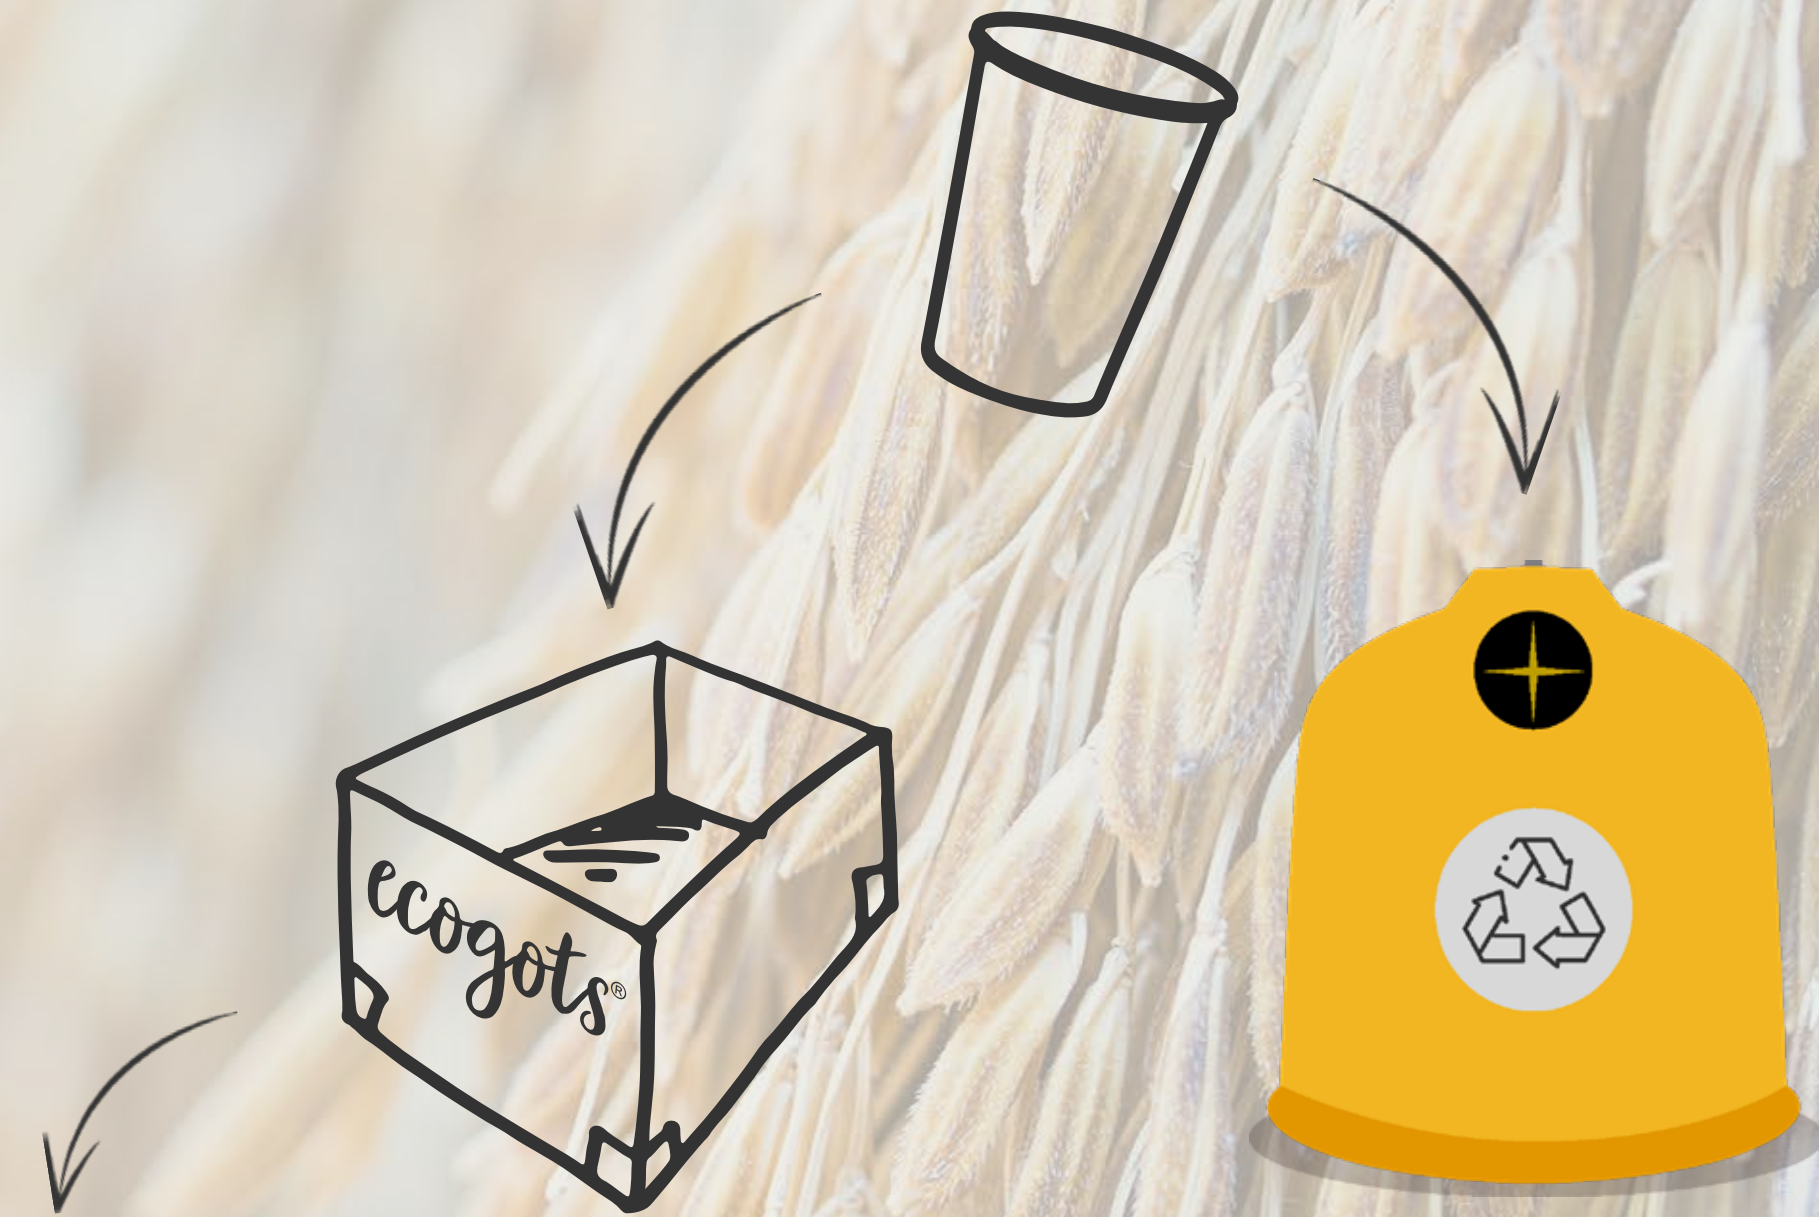

REUSE REUSE REUSE REUSE REUSE REUSE REUSE REUSE REUSE & RECYCLE

and what else can you think of?

Two recycling options:

Return through our re-covery program.

Conventional recycling through the yellow bin.

No packaging needs to end up in the environment — we can recover and transform it into new products. Reuse. Recover. Recycle.

How our recycling process works

1. We recover used products and production leftovers.
2. Materials are cleaned and processed.
3. Recycled material is blended with a controlled percentage of virgin material.
4. The compound is melted and reinjected to manufacture new products. This closes the loop completely.

Our customers are the best part of Ecogots.

They represent everything we believe in. Through their creativity and initiatives, they turn small changes into real impact.

We work with customers of all sizes and across many sectors — all contributing to a more responsible model of consumption.

They understand that meaningful change requires commitment — and that commitment makes progress possible.

WILL YOU JOIN THE CHANGE?

Key Characteristics of Our Packaging.

Food Safety & Performance

- Suitable for food contact.
- Microwave safe — up to 900 W.
- Dishwasher safe — industrial cycles up to 95 °C.
- Suitable for hot and cold foods and beverages.

Sustainability & Circularity

- Reusable.
- Recyclable — dispose in the yellow container.
- Closed-loop recyclable through our material recovery system.
- Designed to reduce waste through repeated use.

Materials

- Made with Oryzite® (purified rice husk biomass).
- Polypropylene (PP5).
- Engineered for strength, safety, and long service life.

Customization

- Fully customizable.
- Choice of base color.
- Custom printing and design application available.

Practical Design

- Stackable — optimized for space saving.
- Designed for everyday professional use.

Local Sourcing (km0)

- Rice husk sourced from the Ebro Delta.
- Manufactured domestically.

The Value of Customization.

Customized packaging creates real added value for our customers. At Ecogots, we approach every personalization project with care, precision, and attention to detail.

We offer a wide range of colors, and if you don't find exactly what you're looking for, our development team will work with you to create the right solution. Printing is available through screen printing or pad printing, depending on the design and application needs.

To support our environmental commitment, we recommend clean, minimalist designs that use as little ink as possible.

Our in-house design team can also help develop or refine your logo and visuals, providing a complete service to ensure your packaging is distinctive and truly unique.

WHY ECOGOTS?

**OUR PACKAGING
IN 10 KEY QUESTIONS:**

1

WHAT IS OUR PACKAGING MADE OF?

Made with Oryzite® (purified rice husk biomass) combined with polypropylene to ensure maximum strength, safety, and durability.

Reusable, recyclable, and designed with a distinctive eco-friendly appearance.

2

WHY AREN'T THEY TRANSPARENT?

The natural color of our products comes from the sustainable raw materials used in their manufacture and from our commitment to reducing plastic content.

3

ARE THEY SUITABLE FOR ALL TYPES OF FOOD AND BEVERAGES?

Yes. They are suitable for soft drinks, coffee, tea, beer, soups, salads, and many other foods and beverages — just like any reusable food container.

4

HOW LONG DO THEY LAST?

Service life depends on usage conditions, but our products are designed for repeated, long-term use in compliance with current regulations.

5

CAN THEY BE RECYCLED?

Yes. They can be disposed of in the yellow recycling container or returned through our recovery program. Recovered material is recycled and used to manufacture new products, closing the loop.

6

**DISHWASHER,
MICROWAVE,
FREEZER?**

Yes to all. Our products are designed for real-life use — choose the option that best fits your needs.

7

**CAN THEY BE
CUSTOMIZED?**

Yes. We recommend minimalist designs using a single ink color for lower environmental impact, but multi-color designs are also possible.
Our team can advise you on the best option.

8

**DOES THE PRINT WEAR
OFF WHEN WASHED?**

No. Our inks adhere firmly and are wash-resistant. Designs remain stable even with frequent use.

9

**WHAT IS THE DELIVERY
TIME? IS THERE A
MINIMUM ORDER?**

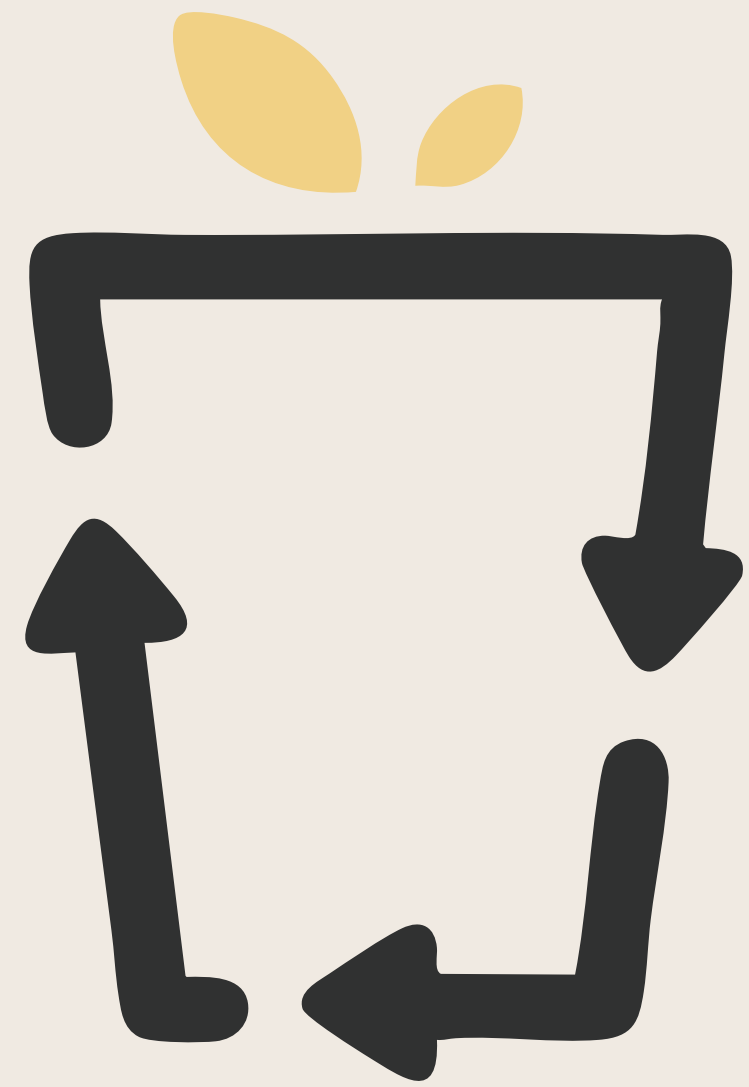

Standard delivery time is typically 7–10 days, depending on quantity and final design.
Minimum customized order: 50 units.
Maximum: according to your needs.

10

**WHY CHOOSE
ECOGOTS?**

Our packaging is designed for repeated use and offers a more sustainable alternative to many disposable options, including coated cardboard and conventional plastic products.

Ecogots is different by design — join the change with us.
